

GARCIA GARCIA
DESIGN & BUILD

LINGOTE

Construction Industrial

Lingote, one of the largest aluminium profile extruders in Portugal, with its origins in Fafe, and now part of the Corialis Group, is expanding its production area with the construction of a new plant.

The new unit has an area of 44,871 m², which will be equipped with various features, including the new extrusion line and a new vertical lacquering line.

This project presented several technical hurdles that Garcia had to overcome, such as the need to have the site sufficiently prepared 6 months after project start so that the extruder's production machinery could be installed, tested and operational by the end of the project. The presence of a river nearby meant that Garcia had to take several environmental precautions, including the need to create a raised platform of approximately 15,000m² to prevent flooding and the constant need for waste control to ensure that nothing was damaged or
